

THE DRILLING PRESS

ANYTHING BUT BORING

Did you know we offer...

FLIGHTING

Jeffrey Machine is a leader in precision flighting production and sales. We burn, bevel and press flights of all sizes ranging from as small as 6" in diameter to as large as 144" in diameter in material up to 2" thick.

We press and test fit each flight to perfectly match the inside diameter of the flight to the pipe stem and mate the ends to be seam welded to the next flight.

We press flights from many different types of plate material such as A36, A572-GR50, AR400, Hardox 450, Astralloy, Tri-Braze, Chromium Carbide Overlay, and Stainless Steel.

REBUILDS

Rebuilding augers and drilling tools on average is about 50% of the cost of a new tool or less.

We can also modify a used tool to better fit your current needs such as:

- Modify the lower flights on the auger in order to make it cut more aggressive. For example: Modifying a used auger from a type 5 cut auger to a type 3 cut auger.
- Changing the drive box to a different size to accommodate a different drill rig on the job.
- Adding new modifications like over cutters or wear protection products such as Tribraze Holders or wear pads.
- Changing tooth holders to our tri-holder in order to accommodate more options such as a Dragon's Tooth or dirt tooth.

We are NOW SELLING

BAROID PRODUCTS

We are excited to announce you can now purchase the following:

- EZ-MUD® PLUS Polymer Emulsion,
